Performance and Functional Testing

Trip Planner — Supporting Project Document

Functional Test Matrix

• T01: Load the planner page.

• T02: Submit valid travel preferences.

• T03: Check itinerary output.

• T04: Check budget output and estimate disclaimer.

• T05: Check packing output.

• T06: Save the completed trip.

• T07: Retrieve the saved trip.

• T08: Submit missing/invalid values.

• T09: Simulate backend or provider failure where possible.

Test Record Format

For each test record its ID, objective, preconditions, input, steps, expected result, actual result, status and evidence location.

Performance Method

If timing is required, run repeated trials with consistent inputs and record observed response times, environment and date. Separate provider latency from local rendering where possible.

Security Checks

Verify that environment files are ignored and untracked, credentials are not hard-coded, errors do not disclose secrets, and public access has suitable controls.

Evidence Limitation

Screenshots show particular visual states; they do not by themselves prove database persistence, performance, security or all error paths.
