Sample Project Documentation Structure

Trip Planner — Supporting Project Document

Suggested Report Order

Title page, abstract, contents, introduction, problem statement, objectives, scope, requirement analysis, architecture, implementation, screenshots, testing, limitations, future scope, conclusion and references.

Phase Documents

Each phase should state its purpose, work performed, decisions, outputs, verification approach, risks and handover to the next phase.

Screenshot Captions

Each image should have a figure number and caption explaining the visible feature. Use readable images and place them near the relevant discussion.

Accuracy Review

Check project title, college details where required, technology names, feature claims, test status and setup commands. Do not claim a feature is complete unless the current implementation supports it.

Revision Process

Update documentation after code or schema changes, then regenerate PDFs and review page breaks, headings, image clarity and page numbering.
