Demonstration of Proposed Features

Trip Planner — Supporting Project Document

Demo Sequence

Open the planner, enter a destination and preferences, generate the itinerary, inspect the budget, inspect packing, save the complete trip and retrieve it if that feature is available.

What to Point Out

Identify the input fields, result tabs/sections, estimate disclaimer and save confirmation. Explain how each output relates to the preferences entered.

Expected Observations

The generated plan should reflect the entered destination and duration, outputs should be readable, and the save operation should provide feedback. Confirm retrieval before claiming persistence is proven.

Fallback

If an external service is unavailable, use the supplied screenshots to explain the intended UI and disclose that the live step could not be completed.

Wrap-up

Summarize the current functionality, the stack and the most important limitations.
