Project Demo Planning

Trip Planner — Supporting Project Document

Pre-recording Checklist

Start backend and frontend, confirm the API responds, check microphone and screen capture, prepare sample input, close private windows and make a short test recording.

Narrative Structure

Use a short introduction, one end-to-end trip, an explanation of the three outputs, a save/retrieve demonstration and a concise conclusion.

Timing

Spend enough time for generation to complete, but avoid long pauses. Keep the cursor deliberate and use a browser window size that makes the text legible.

Risk Handling

AI quotas, network failures or database problems may interrupt the flow. Keep screenshots ready and explain issues honestly.

Privacy and Safety

Never display environment files, API keys, database credentials or private account details. Stop temporary public tunnels after the demonstration.
