Team Involvement in Demonstration

Trip Planner — Supporting Project Document

Role Planning

If multiple contributors are involved, allocate presentation roles based on actual work performed: problem and requirements, interface, backend/AI integration, database, testing and conclusion.

Single Presenter Option

A single presenter can cover the entire workflow in a logical order. Explain the system at a high level before showing individual outputs.

Evidence-based Attribution

Describe only contributions that actually occurred. Avoid assigning unverified work to individuals or claiming untested features.

Review Questions

Be ready to explain why an AI API is used, how the backend protects keys, how saved records are stored, how estimates should be interpreted and what remains future work.

Feedback Loop

Record reviewer questions and user feedback, prioritize improvements and retest affected flows before presenting a revised version.
